Kateryna Stetsenko

Full-stack developer

Contact Information	E-mail: kateystetsenko@gmail.com https://www.linkedin.com/in/kateryna-stetsenko-72311b251/
Summary of Qualifications	I have more than 3 years of expertise as a dedicated and proficient full-stack developer, contributing to the complete software development life cycle. In addition to strong frontend experience (React, Next.js, React Native), I also work with backend technologies, including Python, Django, FastAPI, Celery, Redis, and PostgreSQL, focusing on building scalable APIs, database design, and system optimization. I write clean and readable code with OOP principles, perform refactoring, create documentation, write unit tests, and conduct code reviews. I enjoy both team and individual work, especially in open and communicative environments. My key strengths include responsibility, perseverance, attention to detail, problem-solving, and a passion for learning new technologies.
Experience	
	Horilla
Project Description:	Open-source international HRMS and ERP platform for enterprise operations.
Involvement Duration:	8 months
Project Role:	Full-stack Developer
Responsibilities & Achievements :	▪ Optimized performance by up to 85% (from 30s to 4s) on main pages and 50% on secondary views by splitting monolithic queries into asynchronous HTMX requests and client-side filtering. ▪ Designed Django polymorphic models to create a non-duplicating DB architecture for complex HRMS entities, simplifying migrations and structure. ▪ Developed dynamic UI components using Alpine.js/HTMX and created automated unit tests to increase test coverage.
Project Team Size:	2-3 members
Tools & Technologies:	Python, Django, PostgreSQL, Docker, Valkey, JavaScript, HTMX, DigitalOcean, Alpine js, SMTP server.
	Ctrl.ai
Project Description:	Fleet and driver management platform with real-time operational tracking.
Involvement Duration:	6 months
Project Role:	Full-stack Developer
Responsibilities & Achievements :	▪ Built Celery/Redis task queues for heavy asynchronous background processing and scheduling workflows. ▪ Implemented real-time data fetching and state management using GraphQL and Redux Toolkit, reducing API payload sizes. ▪ Optimized PostgreSQL database models, wrote schema migrations, and built automated deployment scripts.
Project Team Size:	4–6 members
Tools & Technologies:	React, TypeScript, Redux, Python, Django, PostgreSQL, Redis, Docker, Celery, GraphQL.
	Pikt – AI website builder
Project Description:	The web platform featuring AI-driven website creation, integrated e-commerce solutions. Built end-to-end functionality enabling users to launch professional websites with intelligent design generation, payment processing.
Involvement Duration:	9 months
Project Role:	Front-End Developer

Responsibilities & Achievements :	▪ Engineered server-side rendered (SSR) and statically generated (SSG) web pages using Next.js, drastically improving initial load time and SEO discoverability. ▪ Monitored and enhanced web vitals through Google Lighthouse, implementing code splitting, image optimization, and bundle size auditing. ▪ Developed component architecture for intelligent layout generation, linking user inputs directly to automated e-commerce payment flows.
Project Team Size:	9-10 members
Tools& Technologies:	Next.js, TypeScript, Redux, Google Lighthouse.
	AI-Powered Website Creation Ecosystem
Project Description:	The web platform for designers, proposing logo design competitions, works directly with clients and designers to create the best logo designs. Many designers can participate in a competition, so the customer will receive 200+ designs for their brand.
Involvement Duration:	16 months
Project Role:	Front-end Developer
Responsibilities & Achievements :	▪ Implemented bidirectional, real-time communication for live design contests and chat features using WebSockets. ▪ Secured user authentication and access control policies across web and desktop platforms using Auth0 protocols. ▪ Integrated Stripe API for secure, multi-party marketplace payment processing, handling refunds, payouts, and automated invoicing. ▪ Boosted generated static page performance from 60-75 to 90+ on Google Lighthouse by eliminating React hooks overhead, refactoring dynamic components into lightweight Vanilla JS, and optimizing Next.js static HTML outputs.
Project Team Size:	3-5 team members
Tools & Technologies:	Next.JS, React.JS, Electron, TypeScript, Tailwind, Axios, Redux, Formik, WebSocket, Redis, Auth0, Stripe.

Certifications	Cybersecurity (2026)
	Python Pro (2025)
	DEVOPS CRASH COURSE (2024)
	DevOps (2023)
	JAVA FUNDAMENTAL.TEAM PROJECT STAGE (2023)
	React Native (2023)
	JAVA FUNDAMENTAL (2022)
	React (2022)
	Front End Pro (2022)
Education	**Master's degree** Kharkiv National University of Radio Electronics Faculty of Computerized and Robotic Systems Graduated in 2025 **Bachelor's Degree** Kharkiv National University of Radio Electronics Faculty of Automation, Computer-Integrated Technologies and Robotics Graduated in 2024
